Category	Description	Reviewers Comment	Action taken by group
Build	Could you clone from Git and build using the README file?	Able to clone, however not able to build. I think most of this is due to me being on Mac. Important to note that there are compatibility issues	We have changed our HELP.md to indicate that our Software only works with the Windows OS
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	Methods were easy to follow despite not knowing C#. I also appreciated the comments within the code, but additional could be useful for future users.	Additional comments have Been added to help make Functions more clear.
Implementation	Is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	In my opinion, it seemed like a good implementation. Not super familiar with C# so not able to give recommendations as to do things faster/better.	N/A
Maintainability	Are there unit tests? Should there be? Are the tests covering interesting cases? Are they readable?	They did have a test where they showed a sample configuration. It worked fairly well. However, I understand why manual testing is more effective here.	N/A
Requirements	Does the code fulfill the requirements?	Requirements seem to be met or in progress to be met right now. Totally understand the change in focus that was mentioned though.	Our code has met the Retirements outlined in the Document and we are Currently working on bug fixes

| Other | Are there other things that stand out that can be improved? | I think the comment about graying out a button if it couldn't be used (e.g. delete button) would be smart (makes the user more aware of available actions) | We have changed the UI to Reflect when a button is Disabled or enabled based On the color of the button. |
